

# **Developing an Assessment Plan and Writing Learning Outcomes**

## **Overarching Guidelines**

- When someone reads your mission, objectives, and outcomes, they should know what your unit is trying to accomplish.
- Your outcomes should provide a focus for your work.
- More specifically, your outcomes should represent the most important aspects of your unit and paint a picture of what you are about.

#### **Definitions**

- Mission The purpose or essential function of your unit. What you are here for, what your essential values are, and who you serve.
- **Objectives** Broad, general statements of (1) what the program wants students to be able to do and to know and/or (2) what the program will do to ensure what students will be able to do and to know.

## **The Assessment Plan**

- 1. Mission
- 2. Objectives
- 3. Outcomes
- 4. Activities
- 5. Methods
- 6. Analysis
- 7. Decisions/ Recommendations

Outcomes – More detailed and specific statements derived from the objectives; detailed and meaningful enough to
guide decisions in program planning and improvement. Deal specifically with what you want students to learn; how
you want them to grow and develop as a result of your activities.

# **Tips for Writing Learning Outcomes**

- Think about all that you do and jot down a list of the impacts/learning that you expect to occur.
- Rank those by importance and then start with the top third of that list there are lots of things we want students to learn from us, but some are primary and some are secondary.
- Do not be concerned about being right/wrong this is for you.
- Do not be overly concerned with how you will measure your outcomes at the beginning.
- Be sure that it is something you will have a direct impact on something that can be directly attributed to the intervention/program/interaction that students have with you and your work.
- Keep it simple use only one concept per outcome.
- Remember it is a working document, not a final product.

### **Questions to Ask as You Write Your Outcomes**

- Is it meaningful/valuable?
- Is it manageable?
- Is it measureable/identifiable?
- Who is the target audience of my outcome?
- Is it clear how will I know if it has been met?
- Will it provide me with evidence that will lead me to make decisions for improvement?
